IKHLAS BARAKAH HOUSE

IKHLAS Barakah House (IBH) is a Shariah compliant platform to pool funds from various sources such as waqaf & endowment monies, zakat, surplus, IKHLAS rider contribution and contribution from public and to distribute it through prudency processes according to Shariah principles.

IBH is realized in line with the Value Based Intermediation for Takaful (VBiT) initiative by Takaful Ikhlas.

VALUE-ADDED SERVICES

Takaful IKHLAS provides value-added services to IBH by managing and distributing the funds towards identified charity initiatives that realize positive outcomes for communities within the selected focus areas.

OBJECTIVE

To deliver positive and sustainable impact through good governance and prudent fund management towards impactful initiatives that benefit the society.

Dengan kerjasama:
UNIVERSITI KEBANGSAAN MALAYSIA (UKM)

**RAJAH SKEMATIK
SISTEM PENAPIHAN BEKALAN AIR TANAH (SPBAT)**

KEWUJUDAN AIR TANAH

Air tanah boleh ditafsir sebagai sejumlah air yang wujud di dalam liang-liang yang saling berthubung di antara butiran batuan di bawah permukaan bumi. Lapisan batuan atau strata geologi yang mengandungi dan berupaya menyimpan air tanah dalam kuantiti yang bermakna dikenali sebagai akuifer. Air tanah boleh juga diujuk sebagai air yang terbentuk apabila sebahagian air hujan meresap ke dalam tanah dan terkumpul serta mengalir liang-liang di dalam strata geologi yang dikenali sebagai akuifer di dalam zon lepu di bawah permukaan bumi.

Air tanah mempunyai potensi yang sama dengan air permukaan (air sungai, tasik, kolam dsb) dalam menyediakan bekalan air bersih untuk pelbagai kegunaan. Berdasarkan teori, air tanah meliputi sekitar 30.1% komposisi air tanah dunia dan selebihnya adalah 68.7% kalsium, silika dan gips serta 0.3% air di permukaan. Walau bagaimanapun, kawasan yang mempunyai simpanan air tanah bersih adalah terhad. Kajian saintifik yang khusus perlu dilaksanakan untuk mengesan kawasan berpotensi menyimpan air tanah.

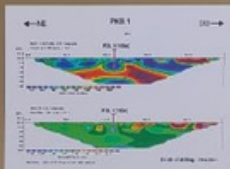

**SURVEI POTENSI AIR BAWAH TANAH MENGGUNAKAN KAEDAH
KEBERINTANGAN ELEKTRIK DAN PENGUTUBAN TERARUH**

Survei keberintangan elektrik dan pengutuban teraruh telah dilakukan di kawasan Politeknik Kota Bharu. Survei ini menggunakan alat ASEM Terrestrial LS-2 dan taburanan elektrod kutub dwikutub. Objektif survei ini ialah mengesan zon berpotensi air bawah tanah sebelum sejadah penggerudian.

"Dalam rezeki kita, ada rezeki orang lain"

Indeed, those men and women who give in charity and lend to Allah a good loan will have it multiplied for them, and they will have an honourable reward

Thank You
